01 SettingsScreen — Architecture

Single draft + single Save → Split tabs with scoped saves

⚠ BEFORE

Settings

Opening hours
Mon–Fri 09:00–22:00, Sat 09:00–23:00

Deposit policy
Never

Floor plan
3 rooms · 14 tables

Save changes

No changes to save

⚠ **ISSUE** One `draft` object covers both opening hours and deposit policy. A staff member editing hours then saving silently saves or discards deposit changes too. No per-section dirty indicator. No unsaved-changes warning on navigation. `cancellation_cutoff_hours` not editable at all.

✓ AFTER

Settings • Unsaved changes

Hours • | Deposit | Cancellation | Floor plan

Opening hours editor (active tab)

Hours editor content…

Save opening hours

✓ **FIX** Split into 4 sub-routes: `/settings/hours`, `/settings/deposit`, `/settings/cancellation`, `/settings/floor`. Each has a scoped Save button ("Save opening hours"). Amber dot on tab = unsaved. Global banner when any tab is dirty. Use Expo Router nested tabs — deep-link + back-button for free.

02 OpeningHoursEditor

Free-text inputs + single slot per day → select dropdowns + multi-slot

⚠ BEFORE — FREE TEXT, ONE SLOT PER DAY

Monday

OPEN 09:00 CLOSE 22:00

Tuesday

OPEN 09:00 CLOSE 22:00

Sunday

⚠ ISSUE 7 × 3 controls stacked vertically. Times are free-text — "9am", "900", "9:00" all accepted, all break `HH:MM` validation. **One slot per day only** — a restaurant open for lunch AND dinner cannot express both. `OpeningHour` type supports multiple records per weekday; the editor does not.

✓ AFTER — SELECT DROPDOWNS, UP TO 2 SLOTS PER DAY

Mon 12:00 – 14:30 × 19:00 – 22:00 ×

Tue 12:00 – 14:30 × 19:00 – 22:00 ×

Wed 19:00 – 22:00 + Add slot

Sun *Closed*

Sat *Closed*

✓ FIX 3-column grid (day / toggle / slots). Times are `<select>` at 30-min intervals — no free text, no validation needed. Each day supports up to 2 slots; "+" adds, "×" removes. Serialises as multiple `OpeningHour` records per `weekday` — **no type change required**.

03 DepositPolicyEditor

AppButton stack → segmented control + amount field

⚠ BEFORE

Always

Never

By party size

⚠ **ISSUE** Three full-height `AppButton` primary-styled buttons — looks like 3 actions, not a single-select setting. No amount field anywhere. `DepositPolicy` type has no `amount_cents` — staff can enable deposits but cannot set what to charge.

✓ AFTER — SEGMENTED CONTROL + AMOUNT

When is a deposit required from guests?

Never | **Always** | By party size

All bookings require a deposit before confirmation.

DEPOSIT AMOUNT

€ 20.00 = €20.00 per booking

Stored as integer cents. Add `amount_cents: number` to `DepositPolicy` type.

Every booking requires a **€20.00** deposit before confirmation.

✓ **FIX** Pill segmented control (one setting, not three buttons). Amount field appears for `always` and `by_party_size`. Decimal input → `Math.round(value × 100)` → integer cents on wire. Currency symbol from `RestaurantSettings.currency`. Live summary shows exact policy in plain language.

04 Cancellation cutoff + Required type changes

Missing editor + DepositPolicy type update

④ CANCELLATION_CUTOFF_HOURS — MISSING FROM UI

⚠ **ISSUE** `RestaurantSettings.cancellation_cutoff_hours` exists in the API type and backend, but `SettingsScreen` never renders an editor. Staff cannot configure the guest cancellation window from the app.

Cancellation window

How far in advance can guests cancel?

Any time | 2 h | 6 h | 12 h | **24 h** | 48 h | 72 h

Guests can cancel up to **24 hours before** their reservation. After that, cancellations require staff action.

\+ **NEW** Preset chips — no keyboard needed. Add `cancellation_cutoff_hours` to the settings `draft` and `updateDraft` call. Add i18n keys: `staff.settings.cancellationCutoff`, `staff.settings.cancellationDesc` to all 3 locales.

REQUIRED TYPE CHANGES

```
// lib/api/types.ts

export type DepositPolicy = {"{"}
  mode: 'never' | 'always' | 'by_party_size';
  min_party_size?: number | null;
  amount_cents?: number | null; // ← add
{"}"};

// No change to OpeningHour —
// multiple records per weekday
// already supported by the API.

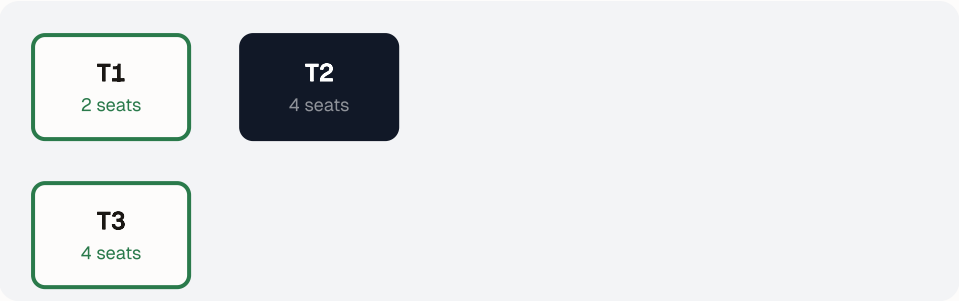
// New i18n keys needed (en/it/de):
// staff.settings.cancellationCutoff
// staff.settings.cancellationDesc
// staff.settings.depositAmount
// staff.settings.depositSummaryAlways
// staff.settings.depositSummaryBySize
// staff.settings.addSlot
// staff.settings.removeSlot
```

○ **NOTE** `PartySizeSelector` has `label = 'Party size'` as a JS default — hardcoded string, violates i18n constraint. Default should be `t('booking.datetime.party_size')` and key added to all locales.

05 FloorCanvas

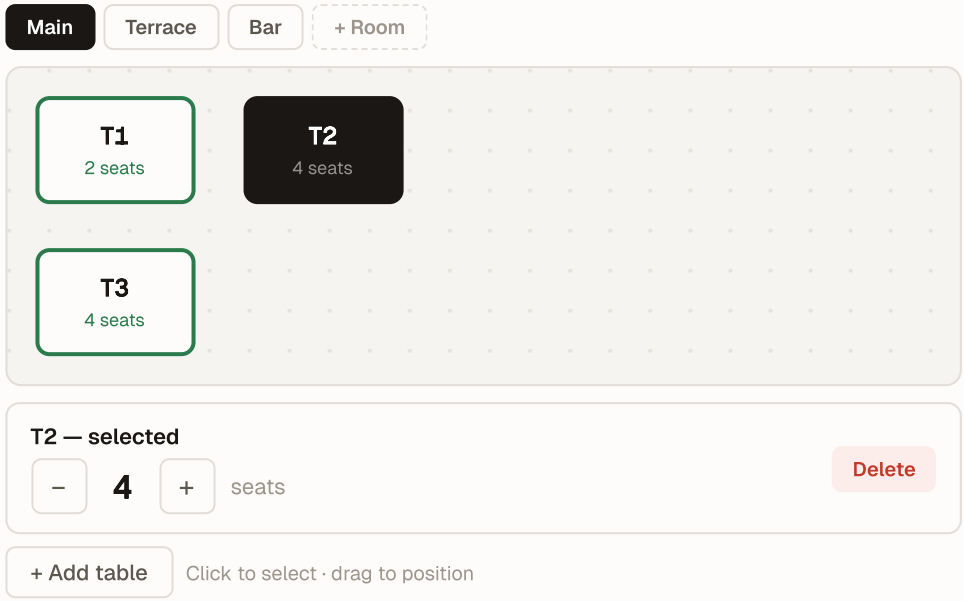
No empty state, no table management, hardcoded colour

⚠ BEFORE



⚠ **ISSUE** No empty state when a room has no tables. No add/delete controls — drag-position only. `DraggableTable` has hardcoded `backgroundColor: '#111827'` — not a theme token. Tables can be dragged outside canvas bounds. No grid snap reference.

✓ AFTER

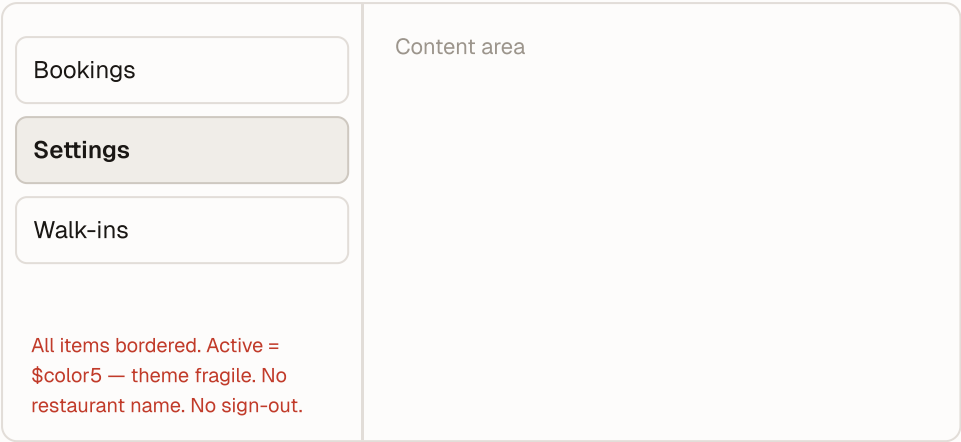


✓ **FIX** Dot-grid background (snap reference). Click-to-select reveals inline inspector (capacity stepper + delete). Empty state with "Add table" CTA. Room tabs + "+ Room". Table colours from status token map, not hardcoded. Add/delete → `staffApi.createTable` / `deleteTable`.

06 DashboardSidebar

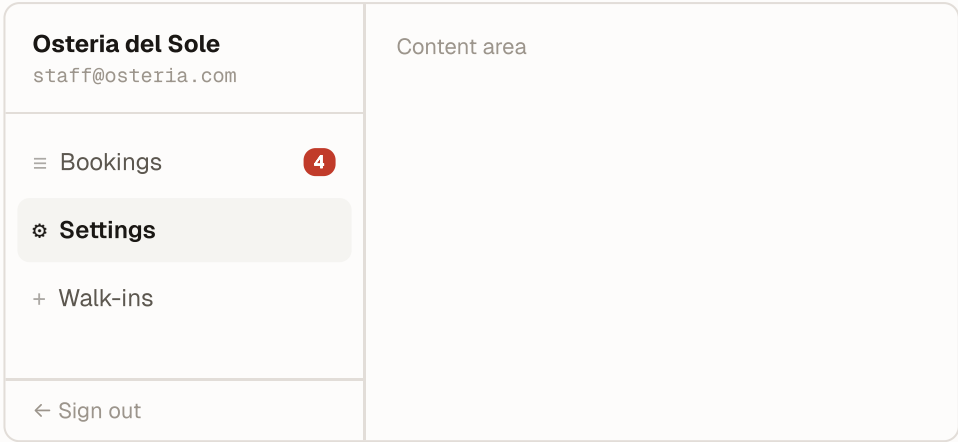
Bordered-box nav + fragile active token → ghost nav + context + sign-out

⚠ BEFORE



⚠ ISSUE Nav items are bordered boxes — looks like a button list, not a nav rail. Active state uses `backgroundColor="$color5"` / `borderColor="$color10"` — resolves differently per Tamagui theme, breaks in dark mode. No restaurant name, no user, no sign-out.

✓ AFTER



✓ FIX Ghost items with `background: $color3` fill on active — no border on any item. Restaurant name + staff email in header. Sign-out pinned to bottom. Pending count badge on Bookings (red = urgent). On mobile (`media.ltMd`) becomes a bottom tab bar.
